FOREWARD

This bulletin contains county estimates of all cattle, all beef cattle, beef cows, and milk cows on farms January 1, 1980-1985, all hogs and pigs on farms December 1, 1979-1984, and all chickens on farms December 1, 1979-1984. Also included are estimates of broilers raised, milk production, egg production, and value of milk, egg and broiler production for the years 1979-1984.

This bulletin, prepared by the South Carolina Crop and Livestock Reporting Service, is a cooperative effort between the Statistical Reporting Service of the United States Department of Agriculture, and the Department of Agricultural Economics and Rural Sociology and South Carolina Agricultural Experiment Station of Clemson University. This cooperative relationship helps promote economy and efficiency by avoiding duplication of effort and conflicting reports. The Federal program serves to provide comparable statistics for all states, which are released in scheduled national reports, while State funds make it possible to prepare and publish more detailed statisticis for South Carolina such as presented in this Bulletin.

The South Carolina Agricultural Experiment Station is a cooperative program financed from federal and state funds. It is the policy of the Experiment Station to comply fully with the regulations of Title VI, the Civil Rights Act of 1964. Complaints may be filed with the Director, S.C. Agricultural Experiment Station, Clemson University, Clemson, S.C. 29631.

SOUTH CAROLINA LIVESTOCK REVIEW 1979-1984

By McCager Thompson

The South Carolina Crop and Livestock Reporting Service revises its livestock statistics every five years based in part on the statistics published in the quinquennial U.S. Census of Agriculture. This review relates to the 1982 Census. The Census has proven to be a reliable benchmark to which we could compare our annual statistics for historic trends. The following is a brief overview of the statistics involved in the Census review period of 1979 through 1984.

The Cattle Industry in South Carolina has steadily increased inventories during this period, as indicated by the Census and our estimates. The Census measured a 7 percent increase in all cattle and calf numbers, increasing from 474,050 in 1978 to 507,279 in 1982. We measured a 15 percent increase during the same period of time, increasing from 575,000 on January 1, 1979 to 660,000 on January 1, 1983. This overall increase actually showed a slight decline in numbers between January 1, 1982 and January 1, 1983. There were 21,000 farms with cattle in South Carolina in 1979 and 19,000 in 1983.

The number of milk cows, which includes any breed milked for home use or sale, declined steadily from 1979 to 1981 but then held constant from 1981 through 1983. Milk production, which is mainly production by commercial dairies, did not follow the trend of milk cow numbers due to the increased productivity of South Carolina's dairies. During this Census period, milk produced per cow increased in every year and total milk production steadily increased. The Census measured a 4 percent increase in milk cow numbers from 1978 to 1982 with 45,544 and 47,559 respectively. We measured a 6 percent decrease with 51,000 milk cows on farms January 1, 1979 to 48,000 on farms January 1, 1983. There were 2,800 farms with one or more milk cows in 1979 and 2,200 in 1983.

The Hog and Pig Industry in South Carolina realized a net decrease of 16 percent over the Census period. Both the Census data and our estimates measured the same percent decrease in inventory numbers. The Census figures showed a drop from 478,660 in 1978 to 399,810 in 1982. Our estimates indicated the same percentage change, but starting with 525,000 head as of December 1, 1978 and declining to 440,000 on December 1, 1982. There were 20,000 farms with hogs in 1979 and 14,000 in 1983.

South Carolina Poultry producers have reduced their annual inventories of all chickens each year since this review period began in 1979. The daily rate of lay of hens and pullets of laying age increased from 68.5 percent in 1979 to 71.0 percent for 1984. There were 7,000 farms with chickens during 1979 and 6,600 in 1984.

The Broiler Industry in South Carolina produced more broilers each year during the 1979-1984 period with the exception of 1980. The Census measured a 35 percent increase in broilers produced during the 1978 to 1982 period with 30,821,889 and 41,578,104 raised respectively. We measured a 21 percent increase for the same period with 39,695,000 produced in 1978 and 47,973,000 in 1982.
